## Essential Hands-on Skills for Minor Oral Surgery in General Dental Practice

### Course Objectives

At the end of the course delegates will be able to

- Have an overview of minor oral surgical procedures carried out in general dental practice and to improve the provision of these procedures by the GDP
- Review the understanding of extractions, surgical removal of teeth and other minor oral surgical procedures
- Enhance the understanding about flap design, suturing and bone removal, opportunity to practice flap elevation & surgical removal of teeth
- Review knowledge about complications and post-op care
- Medical, Clinical & Radiographic assessment of patients for minor oral surgical procedures

### Aims

This course will help to improve the confidence and knowledge of minor oral surgical procedures  
 It will give an insight for managing the complications during the procedures

### Who is this course for

Practitioners interested in providing routine Minor Oral Surgery treatments in their day-to-day practice and who would like to treat suitable cases at their practice rather than refer, and have the potential to increase their revenue and treatment satisfaction
