The Management of Tooth Wear in General Dental Practice

Course Objectives

- At the end of the course delegates will be able to:
- Have an understanding of the practical considerations in relation to the treatment of the worn dentition
- Assess and diagnose tooth wear
- Determine when intervention is required
- Intervene to correct the occlusal problems associated with tooth wear
- Identify when a wax-up is necessary or not needed
- Develop the skills and knowledge to treat worn localised and generalised Tooth Wear using adhesive direct techniques

Who is this course for

- Practitioners interested in the treatment of Tooth Wear in their day to day practice
- Practitioners who would like to treat suitable cases at their practice rather than refer and have the potential to increase their revenue and treatment satisfaction
