## Smile Design & Aesthetics

### Direct and Indirect solutions

#### Course Objectives

At the end of the course delegates will be able to  
 Assess a patient and their smile  
 Apply smile design mock-ups intra-orally  
 Understand different ceramic veneer designs  
 Know correct tooth preparation designs for veneers  
 Understand cementation protocols

#### Aims

To introduce smile assessment methods and smile design techniques including improvement of tooth shape and symmetry  
 Delegates will be provided with an easy formula and technique for assessing smiles and deciding on what changes could be made  
 Tips on sharing this information with dental laboratories so that the correct analogue or digital wax up/mock up can be produced  
 A number of case studies will be considered and delegates will have the chance to design a smile for these cases  
 There will be many tips shared that are immediately usable for clinical practice

#### Who is this course for

Practitioners interested in providing aesthetic dentistry and smile design treatment options in their day-to-day practice  
 Practitioners who would like to treat suitable cases at their practice rather than refer, and have the potential to increase their revenue and treatment satisfaction
